

GAME PLAN

What do we already know?

- **Introduction to oceans and climate**
 - Analyze different datasets to build a model of the interactions between ocean and climate
- **Climate effects in South – East Asia**
 - Understand what major climate effects like the East Asian monsoon and El Niño are – why they occur?
How can we identify them?

Climate in Vietnam

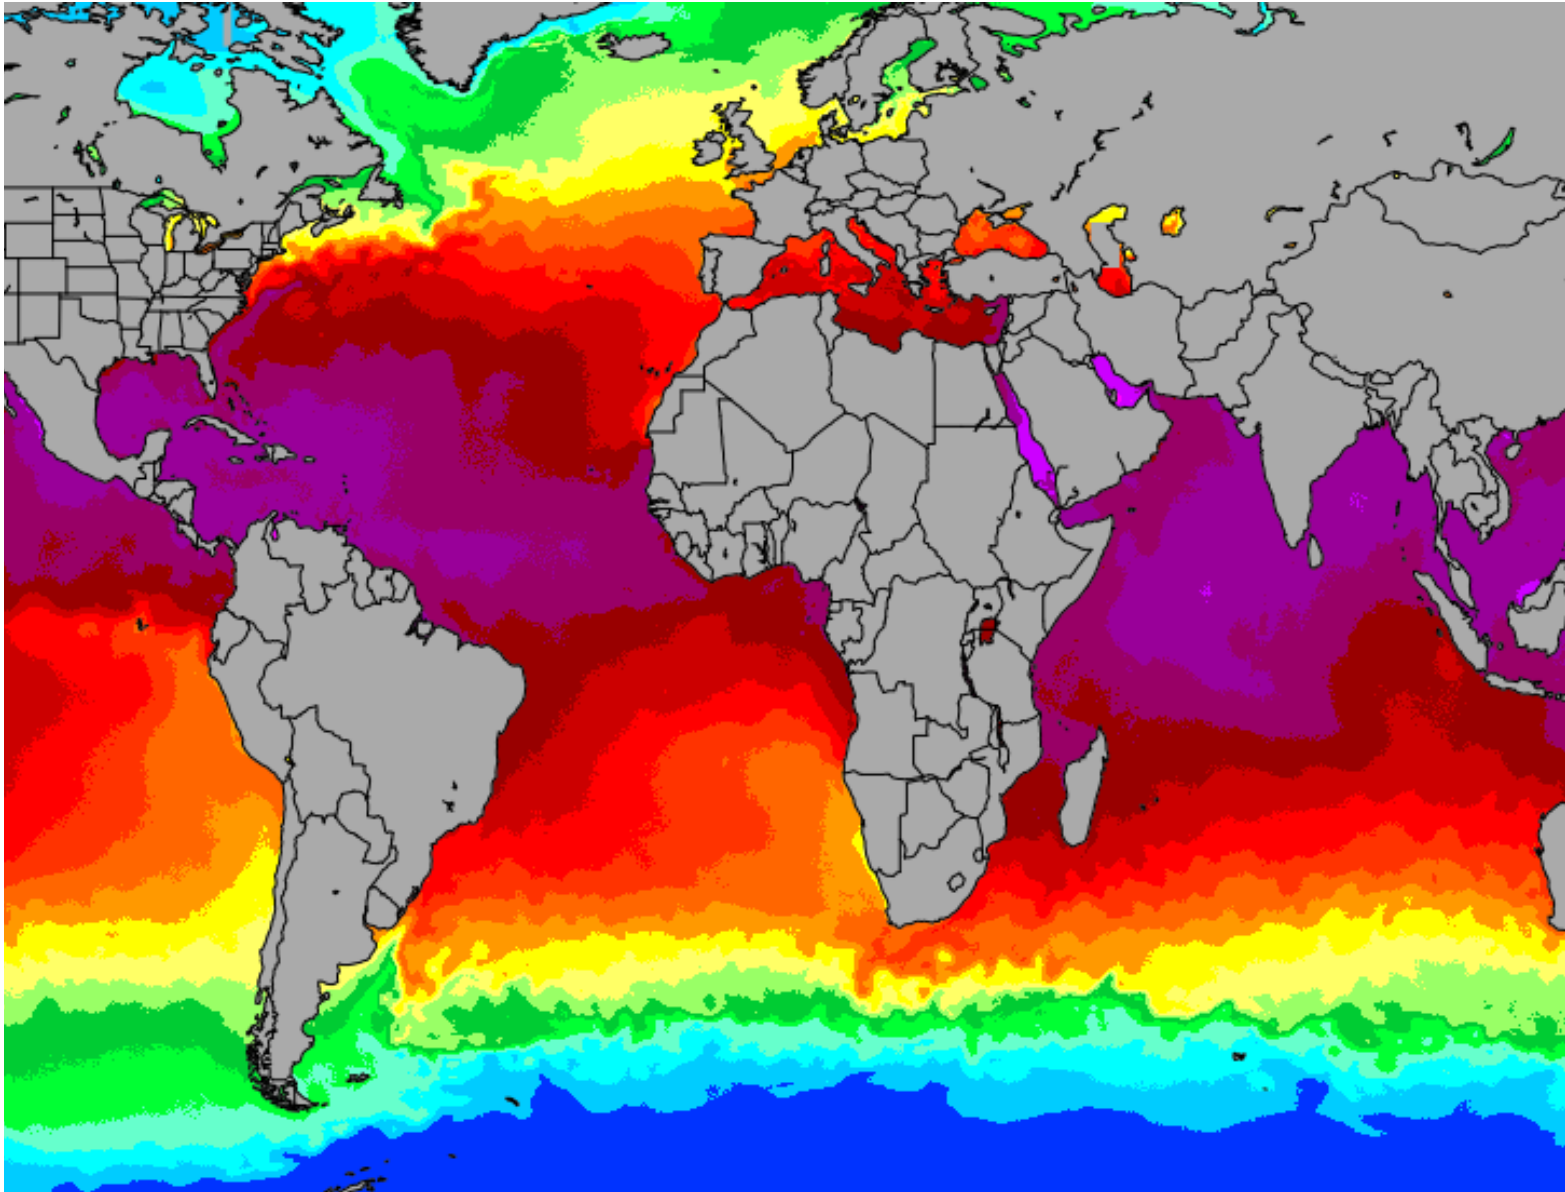

- **Climate proxy data**
 - Convert coral core data into ocean conditions
- **Past climate in Vietnam**
 - Understand how climate effects have changed over time
 - Is there a signal of anthropogenic warming?

WE ARE MEETING NATHALIE!

<https://earthobservatory.sg/project/knowledge-capsules-unlocking-climate-secrets>

Slack me two questions you would like to ask Nathalie!

SEA SURFACE TEMPERATURE

UNIT 1: INTRODUCTION TO
OCEANS AND CLIMATE

OCTOBER 17TH, 2019

WHAT HAPPENS TO THE EARTH'S SOLAR RADIATION?

What's
missing?

Natural Greenhouse Effect

Human Enhanced Greenhouse Effect

HEAT CAPACITY

- Material's ability to absorb heat
 - *Scientific definition:* Amount of energy needed to raise the temperature of a substance by 1 degree.

Water balloon experiment (<https://youtu.be/QuWBtMy8L5A>)

- Which one is water?

TRIVIA ROUND

How much of the excess heat created by global warming is absorbed by the ocean?

- A. None
- B. 10%
- C. 50%
- D. 90%

LET'S MODEL THE EARTH'S OCEANS

Based on what you learned, write/ color/ draw on your map:

- What you expect the surface temperature of the ocean to be from the equator to the poles? (remember to take into account the tilt of the Earth)
- How might this change seasonally?
- What other factors could influence sea surface temperature?

We'll compare our model to [NASA's satellite observations](#)

WORLD

Oceans & Seas

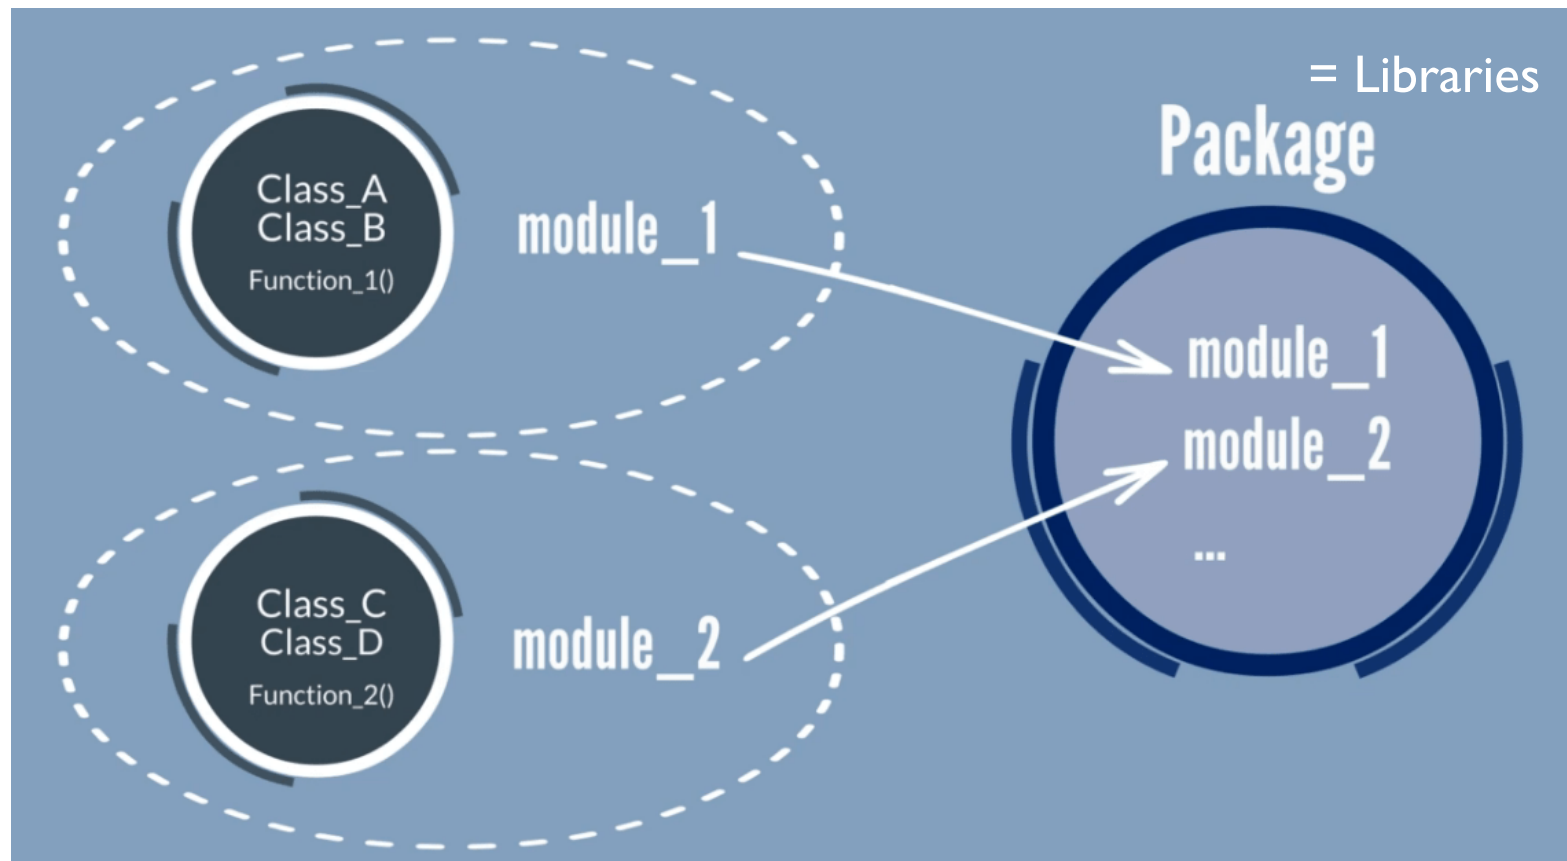

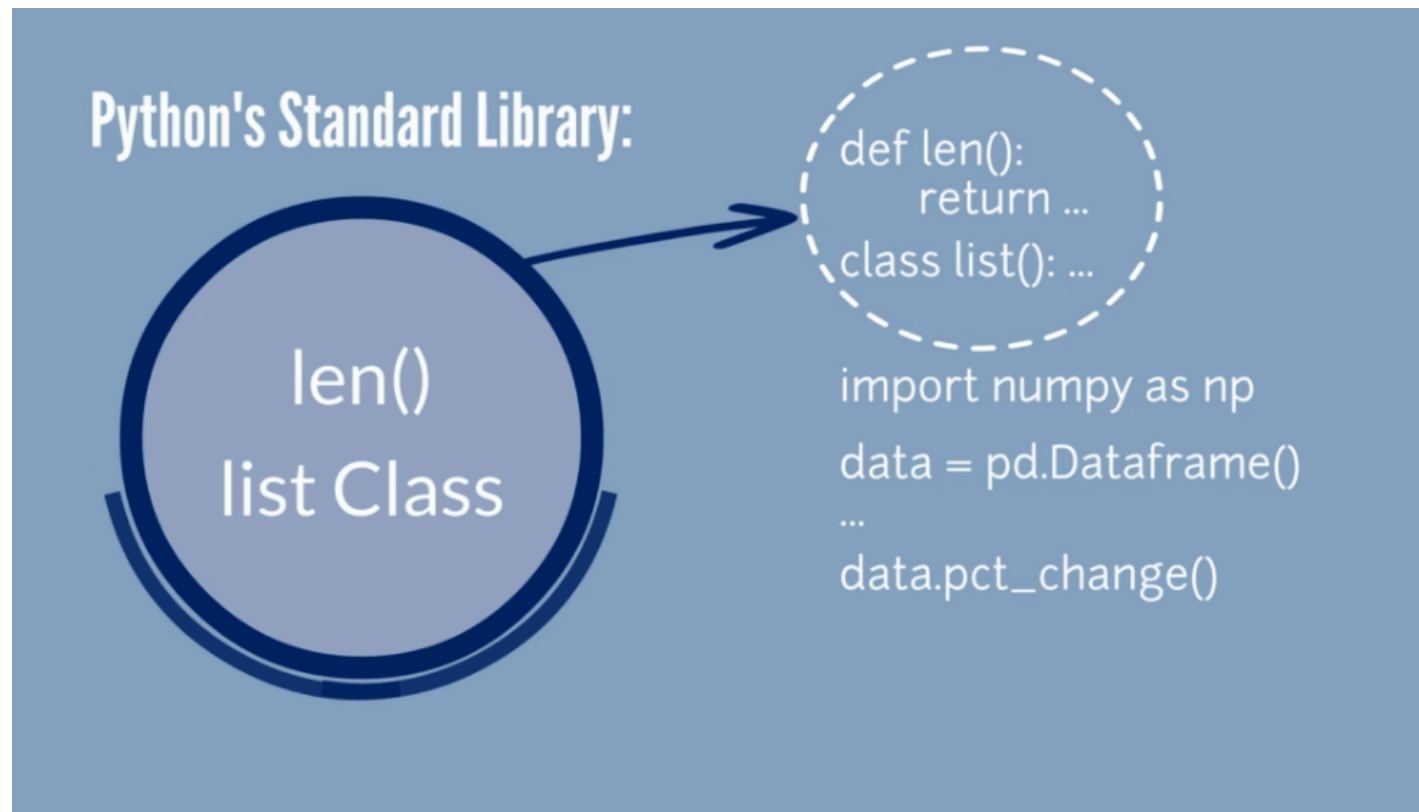

AS WE GO DEEPER...

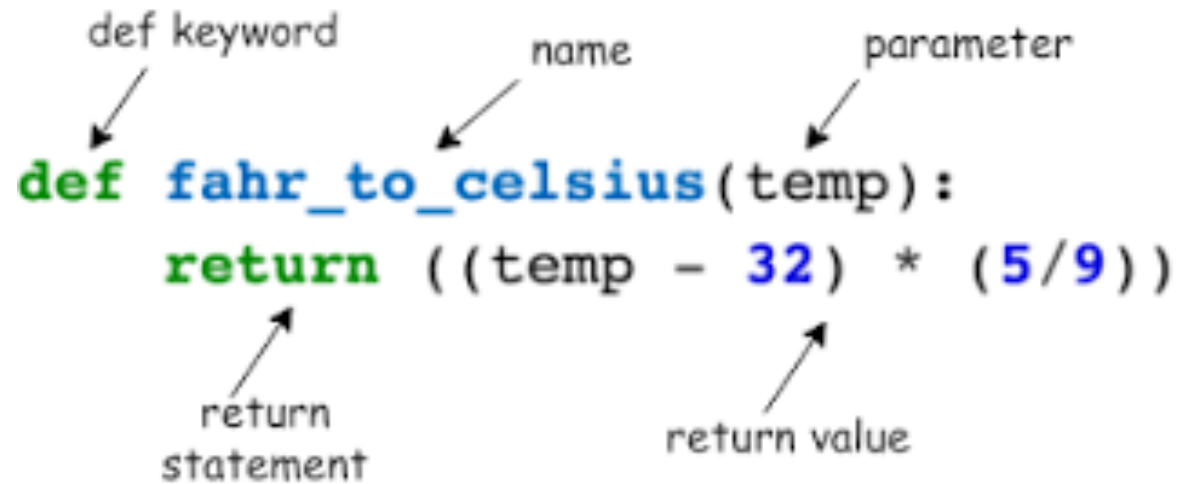

PYTHON REFRESHER: LIBRARIES, PACKAGES, MODULES

PYTHON REFRESHER: LIBRARIES, PACKAGES, MODULES

PYTHON REFRESHER: FUNCTIONS

The diagram illustrates the components of a Python function definition. It shows the code `def fahr_to_celsius(temp):` on the first line and `return ((temp - 32) * (5/9))` on the second line. Annotations with arrows point to specific parts: 'def keyword' points to `def`, 'name' points to `fahr_to_celsius`, 'parameter' points to `temp`, 'return statement' points to `return`, and 'return value' points to the expression `((temp - 32) * (5/9))`.

```
def fahr_to_celsius(temp):  
    return ((temp - 32) * (5/9))
```

Annotations:

- def keyword
- name
- parameter
- return statement
- return value
